Westover Nursery Company

Clayton, St. Louis Co., Mo.

Telephone: Wydown 202

FALL
1924

SPRING
1925

General Directions

Location—Our grounds are on the Olive Street Road, just west of the North and South Road; one mile west of Creve Coeur car line.

Visitors are Welcome

The public is cordially invited to visit our nurseries and greenhouses. Visitors are not annoyed by solicitations of a commercial nature.

Westover Display Grounds

For the benefit of our customers we have planted a large portion of our grounds near our office, where may be found practically every variety of plant we grow, and where you may obtain ideas as to the desirability of the various specimens, by seeing the plants in bloom.

Prices

Prices noted in this catalogue are net, f. o. b. St. Louis. Special prices quoted on application for lots in excess of 1,000.

5 to 25 of the same size and variety take 10 rate.
25 to 100 of the same size and variety take 100 rate.

Unless otherwise specified, all shipments outside of the City of St. Louis and St. Louis County go forward by express.

All orders are accepted subject to prior sale and loss caused by drought, fire, hail or other causes beyond our control.

Prices subject to change without notice.

Terms

Cash must accompany all orders to insure prompt shipment.

Parties desiring credit must furnish satisfactory references and allow sufficient time for investigation. When credit is extended, invoice will be mailed on day of shipment and payment must be made on the 10th of the month following date of invoice.

No orders accepted for C. O. D. shipment.

Guarantee

We are vitally interested in the success of everything purchased from us. We will cheerfully advise you what, where and when to plant. We will advise you how to care for stock after planting. All products sold by us are of selected quality, and when promptly and properly planted and given ordinary care, should thrive under the severe climatic conditions peculiar to this section, where they are grown.

We do not guarantee stock to grow, or results in any way. No complaint will be entertained that is not made immediately upon receipt of stock.

There are so many causes for failure over which we have no control that we can assume no responsibility after stock is delivered in good order. Poor soil, unfavorable weather, ignorant or careless culture, all contribute to failure and are beyond our control.

Our warranty insures the purchaser obtaining healthy, vigorous plants true to name.

Landscape Contracting

We do not execute any planting outside of our grounds, as this important work is a profession quite apart from the growing end of the industry, but we are in close touch with all the leading landscape architects and gardeners and will gladly furnish customers with the names of reliable specialists in this line, who are prepared to estimate on contracts of any magnitude.

State Inspection

The *Westover Nurseries* are inspected at frequent intervals during the year by the Nursery and Orchard Inspection Service of the Department of Agriculture of the State of Missouri; a Department Certificate of Inspection, attesting the fact that our nurseries are free from parasitic growths and harmful insects, accompanies each shipment.

"Members American Association of Nurserymen: All quotations, prices, contracts and grading both for purchase or sale are based on HORTICULTURAL STANDARDS adopted by this Association, June, 1923."

TRANSPLANTING DIRECTIONS

Preparing the Soil

No one thing is of more importance to the ultimate development of plants than thorough preparation of the soil. When the natural soil is of a poor quality, replace to a depth of about two feet with a good grade of loam. For a single plant, dig out a hole twice as large as is really necessary to contain its roots. When group plantings are to be made, dig out the whole area. Well rotted manure may be mixed into the soil to good advantage, but always avoid the use of fresh manure in contact with roots of a plant. The problem of drainage must be considered. If the natural drainage is poor, artificial drainage must be made.

Planting

At the time of planting, most plants need a little shaping, both of tops and roots. Since a portion of the root system has been cut away in digging, a corresponding portion of the top should be removed. It is best to retain the general shape of the plant, cutting away any weak or injured branches and about one-third of the previous year's growth from the end of each branch. Evergreens and stock dug with a ball of earth are exceptions. The root system should be examined and all split or bruised roots removed with a diagonal cut.

Be careful not to set the plant too deep, for injury is sure to follow. Place the plant a little deeper than the point at which it is to remain, and carefully spread out all the roots (plants dug with a ball of earth excepted), now shovel in the dirt until the roots are covered about two inches. Lift the plant up and down until the soil settles in well and no cavities remain. Throw in more earth and with a blunt stick work well in under the roots. Press down the soil with a firmer or the foot, beginning at the center of the plant

TRANSPLANTING DIRECTIONS—Continued

and working out. When the hole is filled, to within three or four inches of the top, pour in two or three pailfuls of water. Allow this to disappear, and then fill the hole, leaving a slight depression around the plant.

In planting evergreens or other plants dug with a ball of earth, care should be taken to prevent breaking the ball. Place the plant in the hole so that the top of the ball is not more than one inch below the level of the ground. Put in enough soil to hold the plant firmly in place. Do not remove the burlap covering from around the ball, but rip it at the top and down the sides in about three places and crowd to the sides of the hole. Fill up as described above.

Watering and Mulching

After a plant has been set in the ground it should be mulched with manure, leaves or lawn clippings to prevent evaporation of the soil's moisture. When mulching is unsightly or not practical, occasional watering and frequent loosening of the soil serves a similar purpose. The ground around plants should never be allowed to become dry and if there is not sufficient rain, artificial watering should be supplied.

After Care

It is our earnest desire to assist all lovers of trees and other plants, from a practical standpoint by helping them to attain desired results. Many plantings never receive the after care they require. This applies more especially to home foundation and other intensive plantings of both evergreens and shrubs. Such plantings are often massed with the plants placed close to one another to produce immediate effects. Unless these plantings are trimmed consistently from season to season, they soon lose their original attractiveness and become ragged and overgrown, whereas if they are given proper care, they improve in appearance from season to season and can be kept within any required limitations.

TRANSPLANTING DIRECTIONS—Continued

Deciduous shrubs should be pruned so as to remove a portion of the old wood each year, saving the new growth. By this method each plant is entirely renewed every few years. Judgment must be used in pruning so that as much of the blossoming wood as possible will remain. This refers especially to Spiraeas, Forsythia, Japan Quince, etc. Such shrubs as Hydrangeas, Altheas and most roses, bloom on the new growth and are improved by pruning before the spring growth begins.

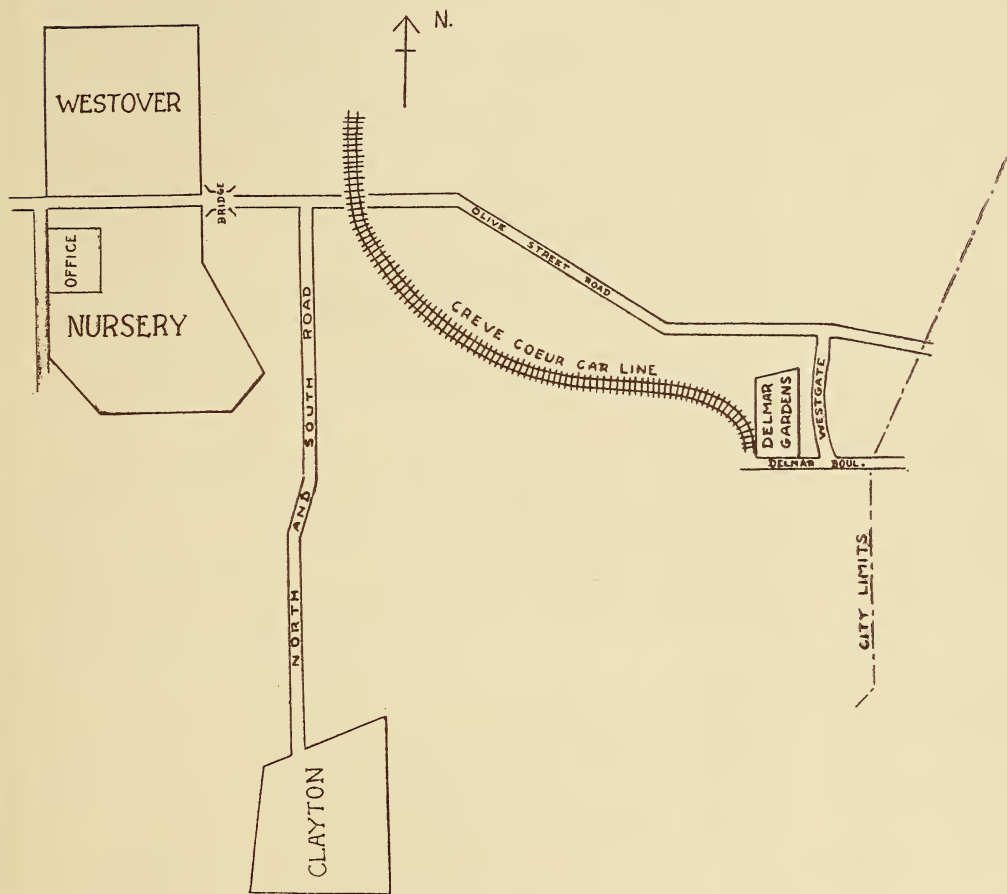

A little mid-summer pruning is often advantageous, especially where plants are becoming unshapely or are overgrown. Massed plantings of evergreens need careful pruning and shaping each season, otherwise the stronger growers will overcrowd the others. This trimming can be done to advantage just before the new growth starts in the spring.

These brief instructions are only intended to give a few simple pointers. Write to us freely if you have any garden problems which are causing you anxiety. With our wide experience it is probable that we can help you.

Protection

It is advisable to stake a newly planted tree in locations where the wind blows severely. The continued shaking of the tree prevents the little roots from getting a hold in the soil and often results in failure of a plant to grow.

Suitable guards should be provided for all trees planted where exposed to horse bites, hub scars and similar injuries.

The Westover Nursery is near the city limits, very accessible
by motor car or trolley
